1. Introduction

The purpose of this File Layout And Audit Trails Manual (“Manual”) is to establish the standard in which the data files and trails requested by BSM must be delivered, aiming to streamline data extraction work by Participants and their contracted technology providers and simplify the technical analysis that is performed in relation to the data necessary to carry out BSM’s supervision and inspection.

The improvements to this version of the Manual are highlighted as **yellow**.

2. Scope of the Manual and Files – General Information

2.1 Applicability of Layouts

The Participant must send an e-mail to the address bsm@supervisao.com.br, up to 30 days before submitting the layout, with the title “Monitoramento de Dados – Aplicabilidade dos Processos”, informing which layouts are not applicable or subject to monitoring by BSM, with their respective justifications.

For new Participants who have commenced their operations following the issuance of authorization by B3, it is required that layouts be submitted in the month after the start of their operational activities, in accordance with the layout submission schedule available on the website.

2.2 File Specification

The databases and audit trails defined in the layouts in section 3 of this document must follow the following specifications for delivery:

- File format: Apache Parquet¹, .TXT with delimiter “|” or .CSV with delimiter “;”, text qualifier in quotation marks (“”) and header in the first line (ANSI or UTF-8 encoding);

¹ The Parquet file is a columnar storage format designed for efficiently storing and processing large volumes of data. Unlike conventional file formats that store data by rows, Parquet organizes data by columns. This means that each column is stored separately, allowing for selective reading of the relevant columns for a specific query.

- File name: Unquestionably, the names (in uppercase letters) must adhere to the formatting described in the respective sections of the layouts to be submitted, specifically in the File field;
- Line terminator configuration: Windows standard (CRLF);
- Field with multiple data: Insert a new line for each occurrence within the multiple field², replicate the content without changes to other columns and change only the field in question;
- Fields not applicable: Leave the non-applicable field blank;
- Form of delivery: Electronic;
- Channel for transferring files: BSM Portal (in the folder corresponding to the previous month – for example: in February, carry out the upload in the January folder);
- Maximum file size: 2GB per file. If the file to be forwarded is larger than the maximum allowed capacity, it will be necessary to split it into more than one to upload it within the required parameters required (with the following nomenclature – e.g.: file_1 and file_2);
- The systems provided by B3 (e.g.: Sincad, CSD, ePuma, Line, among others) are out of scope, since BSM has direct access to the data due to the organized markets administrated by B3;
- The content of the file headers is free and can be adapted as needed by the Participant. However, it is essential that (i) the file contains all fields in the order defined in the document; and (ii) the minimum formatting parameters are respected to ensure consistency and the correct interpretation of the data;
- Certain fields in the layouts are designated as mandatory, meaning they must be filled out without fail. However, there may be situations where the information required for a mandatory field is not available or does not apply to the context of the file being generated. For these cases, we request that the mandatory field be filled with the hyphen character ("-") as a placeholder;
- Files without content must be submitted blank, with only the header included; and

² Example: For cases in which the client has more than one asset as allocated guarantee, insert one row per asset, repeating the client's other data in the other fields.

- The Participant is responsible for validating the integrity of the file regarding minimum fields, format and content, before making it available to BSM.
- How to fill in according to the requirement status:
 - Mandatory (Yes) and the information exists → fill the value in the required format.
 - Mandatory (Yes), but the information does not exist / is not applicable → fill “-”.
 - “Yes, if applicable”:
 - If applicable → fill the value;
 - If not applicable → fill “-”.
 - Mandatory (No) and the information exists → fill the value in the required format
 - Mandatory (No), but the information does not exist / is not applicable → fill “-” or leave it blank.

Layouts developed before the implementation date can be forwarded to the BSM team for formatting tests. This procedure is an opportunity to ensure that everything is in accordance with the requirements and that possible adjustments are identified and made in advance. To facilitate the process and ensure the efficiency of the tests, we ask that the Participant who opts for early submission send an email to bsm@bsmsupervisao.com.br with the subject “Monitoramento de Dados – Teste de Layout”, requesting the creation of the test item in the Portal for file upload. We remind you that early submission is not mandatory but highly recommended to ensure a smooth transition on the official delivery date.

2.3 How to send files

The databases and audit trails defined in the layouts in section 3 must be available through the BSM Portal³ within the requested item of the reference month (for example: in February, upload in the January folder) **up to the tenth (10th) business day of the subsequent month.**

Further information about the BSM Portal can be accessed at the following links:

³ Exceptions (other ways of accessing/sending files) must be addressed with BSM to assess the process applicability.

2.4 BSM Data Storage

The data will not be stored in BSM and will be discarded after the information generation work. The Participant is responsible for storing the data according to current regulations.

2.5 Data Disposal

Data disposal is the process of fully destroying information, thus making any type of recovery impossible. In other words, after the disposal process, the data is considered irretrievable by anyone who subsequently has access to the file or environment where the information was stored.

Thus, data disposal is different from file deletion, where a file deleted from a device may be inaccessible to the end user, but the information remains, in some form, on the device's hard drive.

BSM follows the guidelines on the disposal of information generated or transmitted in its environments and systems, regardless of the storage medium, taking as parameters the B3 standards, current legislation, other regulations related to the topic and best management and security practices.

2.6 Monitoring and Storage of Test Results

The results of tests performed by BSM, through Data Monitoring, and their storage are the responsibility of the Participant. Thus, it is necessary that the Participant adjust the reported nonconformities and revisit the internal processes and controls to improve the effectiveness of the results as the nonconformities are reported.

The observation's percentage obtained from the Data Monitoring results will be properly stored by BSM and utilized in subsequent regular audits. Furthermore, the data and information obtained from MC²D may be used in other supervisory activities carried out by BSM and in collaborative monitoring with B3, in line with applicable guidelines.

Additionally, it's informed that, for those Participants submitted to regular audit, the most recent submission of layouts will be stored by BSM. This action aims to complement the exclusive tests of the regular audit. This measure has been adopted to streamline the process, avoiding the need for a new request to the Participant and minimize potential rework. After the issuance of the report, the data will be expunged.

The Participant ensures the accuracy, integrity, and completeness of the files submitted to BSM. However, BSM may evaluate these files during regular and specific audits.

2.7 Information integrity provided by the Participant

In accordance with Section II, Article 82 of CVM Resolution 135/2022, the Participant must provide all information required by the administrative and supervisory bodies of the entity responsible for administering the organized market and its respective self-regulatory bodies.

Thus, errors in filling out the layouts that result in inconsistencies in the results obtained by MC²D will not be considered false positives, but rather failures in the integrity of the file and the information provided. These will be considered as 100% inconsistency in the MC²D test result, as the absence of the file in the format established in this document prevents the execution of the analyses. Furthermore, these results may also be reported during regular or specific audit processes carried out by BSM. For the purposes of the MC²D processes, it is expected that the Participant will make the necessary corrections by the next submission of the layouts.

In contrast, false positives are considered to be inconsistencies identified in the results obtained by MC²D⁴ from the evaluation of complete databases, duly filled out and submitted by the Participant within the stipulated deadline, which result from

⁴ It is important to note that the Participant has until the 10th business day to resubmit the files in accordance with the layout defined in the manual, in case the initial submission does not meet the established standards. After this deadline, BSM will close the file receipt period, and for the purposes of the results, it will be considered as 100% inconsistency, since the absence of the file in the format established in this document prevents the execution of the analyses.

eventual failures or unforeseen situations in the intelligence of the tests performed by BSM. In such cases, the Participant must respond to the official letter sent with the results of the evaluations, presenting the necessary evidence to justify the cases identified as false positives, allowing BSM to analyze and, considering adequate justifications, remove the inconsistency.

It is worth noting that the Participant must ensure the veracity, integrity, and completeness of the files sent to BSM, i.e., the data submitted is a faithful reflection of each Participant's internal information. Nevertheless, BSM may evaluate these files during regular and specific audits.

2.8 MC²D Results

The results of the tests performed in MC²D will be reported to Participants on a monthly basis. After the ten (10) business-day period established for comments and feedback, if the Participant does not raise any questions regarding the tests performed, nor indicate the occurrence of false positives **or the submission of data lacking integrity**, BSM will consider that there are no additional observations concerning the inconsistencies identified and, consequently, that the results have been validated by the Participant. Thus, the records contained in the official letter will be considered as opportunities for improvement for future submissions and will be included in the results section of BSM's Supervision Reports, MC²D Score⁵, and *Supervisão Baseada em Risco* (SBR) assessment.

⁵ The MC²D Score is calculated based on various factors related to the layouts. It includes delays in the submission of layouts, layouts that were not submitted, layouts that are not complete, layouts that do not follow the standard established in the manual, and inconsistencies identified in the tests performed.

3. Listed Market Manual

The layout Manual is applicable to all Participants in the listed segment⁶, regardless of the access category. This means that the rules and standards established in this document must be followed by all, without exceptions. This implies that all entities operating within the specified segment, whether as a Full Trading Participant, Trading Participant, Clearing Member, Settlement Participant, or Custody Agent, are required to adhere to the standards and guidelines set forth in the Manual.

In the table below, there is a detailed overview of the applicable processes for each access category:

	RLP (Retail Liquidity Provider)	Registration	Suitability	Orders	Settlement / Financing for Share Purchases and Loans	Treasury/Current Account	Custody	Risk / Compulsory Settlement	Investment Advisor	Internal Controls	AML/CTF (Anti-Money Laundering/Counter-Terrorism Financing)	Operations and Offers Supervision	Professional Certification	Information Security	Infrastructure Support	Fraud Prevention Mechanisms
Full Trading Participation (PNP)	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•
Trading Participation (PN)	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•
Clearing Member (MC)					•			•		•			•	•	•	
Exchange Clearing Member								•						•		
Settlement Participant (PL)		•			•			•		•	•	•*		•	•	•
Custody Agent (AC)		•					•			•	•			•	•	•

• Applicable Process

* Operations Supervision.

For a view of **(i)** the applicable process to the Participants by type of access to the organized markets administrated by B3 and **(ii)** of all tests to be concluded by layouts see **Appendix I** and **Appendix II**, respectively.

⁶ The submission of information that does not correspond to clients in the listed segment increases the volume of files sent by Participants and, therefore, negatively impacts the BSM validation process, resulting in false positives in the test results. Therefore, we reinforce the importance of sending only information related to listed clients for ALL layouts.

Start and Frequency of File Delivery (Listed Market)

The databases and audit trails defined in the layouts in section 3 must be made available according to the frequency defined.

The schedule for submitting the layouts, including the submission frequency, is published on the BSM website (*Auditoria de Participantes => Monitoramento Conjunto Contínuo de Dados*).

The table below shows the databases and audit trails along with their respective file delivery start dates:

3.1.3 Minimum Margin Parameterization Trail

File description: Records of the minimum margin parameterization to be required by Index mini-contract (WIN) and Dollar mini-contract (WDO)

Objective: Monitoring the value of the minimum margin parameter of Index mini-contract (WIN) and Dollar mini-contract (WDO) assets

File name: MARGEM

Frequency: The schedule for the delivery of the layouts, including the frequency of the deliveries, is published on the BSM website

Scope: First to last day of the previous quarter (last three month basis¹²)

Ref:	Field	Description	Type	Format	Mandatory?
1	Código Participante	Participant Code	Number	Without check digits	Yes
2	Nome Sistema	Identification of the system used to parameterize margins	Text	-	Yes
3	Data	Minimum margin setting date	Date	yyyy-mm-dd	Yes
4	Hora	Minimum margin setting time	Time (BRT)	hh:mm:ss or hh:mm:ss,sss	Yes
5	Usuário	User who configured the minimum margin	Text	-	Yes
6	Código do cliente	Client code at B3	Text	Plain text, without check digit and without punctuations (" ", "-" or ",")	No
7	Ativo	Description of the parameterized asset (Mini Ibovespa Futures (WIN) and Mini U.S. Dollar Futures (WDO))	Text	-	Yes
8	IdValor/Quantidade	Description of the margin parameterization.	Text	Options: "Valor" or "Quantidade"	Yes
9	Valor/Quantidade (*)	Parameterized value or quantity for contract negotiation. (E.g.: 100.00 for WIN – 150.00 for WDO)	Number	With 2 decimal places separated by "," and without the currency identifier (R\$, \$, etc.)	Yes

(*) For systems that have parameterization by number of contracts, it is expected that the number of contracts parameterized for WIN and WDO will be recorded in the field.

¹² Trimestral base starting from April 2026. The January database (to be submitted by the 10th business day of February 2026) should include the bi-monthly basis

3.1.4 Opt-in and Opt-out

File description: Record of the client's express opt-in to use the RLP as well as for it opt-out, both for the derivative market and the stock market.

Objective: Monitoring whether there were client transactions with the RLP product before their opt-in and whether there were transactions with the RLP product after their opt-out

File name: OPTIN_OPTOUT

Frequency: The schedule for the delivery of the layouts, including the frequency of the deliveries, is published on the BSM website.

Scope: First to last day of the previous quarter (last three-month basis)

Ref:	Field	Description	Type	Format	Mandatory?
1	Código Participante	Participant Code	Number	Without check digits	Yes
2	Nome Sistema	Identification of the system used to register opt-in and opt-out	Text	-	Yes
3	Código do cliente	Client code at B3	Text	Plain text, without check digit and without punctuations (".", "-", " or ",")	Yes
4	AccountId	Identification of the client's user in the Participant's system.	Text	Plain text, without check digit and without punctuations (".", "-", " or ",")	Yes
5	EventType	Type of event, RLP order opt-in or opt-out	Text	"in" or "out"	Yes
6	OptType [1]	Tegment type derivatives , equities or both	Text	"derivatives", "equities" or "all" (*)	See Table 3
7	EventTime	Timestamp of the moment the client signed up or discontinued the RLP order	Date (BRT)	yyyy-mm-dd hh:mm:ss	Yes
8	ProcessTime [2]	Timestamp of the time the client request was processed in the Participant's OMS	Date (BRT)	yyyy-mm-dd hh:mm:ss	See Table 3
9	EventOrderId [3]	Identification of the person responsible for joining or discontinuing the RLP order	Text	Inform the user	See Table 3

(*) In case of ALL, the field can also be forwarded blank

Table 3 – Applicability of fields	
Ref:	Details
[1]	Mandatory item only in the event of opt-in and opt-out specific to each segment. Non-mandatory item if the Participant uses generic opt-in and opt-out, that is, that they serve both the Derivatives and Equities segments.
[2]	If opt-in or opt-out are subsequently processed in the Participant's order management system, either through a daily routine or manually, for example, the base must include field 6 ("ProcessTime") containing the timestamp where the client request was processed internally. If opt-in and opt-out processing is carried out at the same time that the client subscribed or discontinued the RLP offer (real time), fill in the field with the same information as <i>EventTime</i> .
[3]	If the Participant has alternative flows through service channels (e.g. chat, telephone, email) to carry out the opt-in or opt-out, the base must include field 7 (" <i>EventOrderId</i> ") containing the person responsible for adhesion or discontinuation on behalf of the client.

3.1.5 List of Clients adhering to the use of RLP

File description: List of clients on the base date of "D-1", who granted their authorization to use the RLP (opt-in). Example: For the quarter from November to January, extract the list of customers in the position of October 31

Objective: (i) Check for possible false positives in the analysis carried out for cases in which the client granted authorization to use the RLP (opt-in) in the period prior to the evaluated quarter; and (ii) alignment of the investment profile with the traded product.

File name: BASEOPTIN

Frequency: The schedule for the delivery of the layouts, including the frequency of the deliveries, is published on the BSM website.

Scope: Photo of the **first day** at the beginning of the evaluated quarter

4. Over-the-counter Manual

The Manual applies to Participants in the Registration Subsystem of the over-the-counter (OTC) segment with the access categories of Investor Custodian, Securities Intermediary, or Client Participant.

Participants with access to the above categories and who trade the following assets: CRA, CRI, CFF, COE, DEB, and Derivatives with and without CCP, are required to adhere to the standards and guidelines established in the Manual.

The registration process will be applicable to the Over-The-Counter Manual, and the following Access Categories are applicable to this process:

- Investor Custodian
- Securities Intermediary
- Client Participant

2026 Participant Scope

BSM commits to conduct a thorough evaluation of the scope of Participants who must submit the layouts by 2026. This meticulous process aims to ensure a gradual start for all involved, allowing for adaptation to the process without disruptions from the new requirements. The analysis will be conducted according to BSM's internal procedures and standards, ensuring that all Participants are treated fairly and uniformly.

Individual Notification

After evaluating the scope of the Participants, BSM will proceed to individually notify each Participant. This communication will be clear and objective, informing about the obligation and specifying the start date for submitting the layouts. BSM guarantees that all notifications will be sent with adequate advance notice, providing participants with sufficient time to prepare and adapt their systems as necessary.

Commitment to Transparency

BSM reaffirms its commitment to transparency and efficiency throughout the notification and layout submission process. Participants can rely on BSM's support to clarify doubts and receive guidance throughout the process, ensuring that compliance with requirements is achieved smoothly and without issues.

This manual serves as a guide for Participants, highlighting the importance of paying attention to BSM communications and strictly following the instructions provided. Adherence to the established procedures not only ensures regulatory compliance but also strengthens the functioning of the Market as a whole.

For questions or more information, participants should contact BSM support through official channels.

Start and Frequency of File Delivery (Over-the-Counter)

The databases and audit trails defined in the layouts of section 4 must be made available according to the defined frequency.

The delivery schedule for the layouts, including delivery frequency, is published on the BSM website (Participant Audit => Continuous Joint Data Monitoring).
